FARMINGTON, Conn., January 16, 2006 – TRUMPF Inc. has appointed Peter Grollmann as the new product manager for laser marking. Grollmann will be responsible for managing TRUMPF's line of laser marking products in North America.

In this role, Grollmann will oversee the North American sales and marketing of the diode-pumped VectorMark® systems that are able to laser mark metals, plastics, coatings, electronics and ceramics. The high-speed laser marking technology is reliable, easy to use, shortens processing times, and improves contrast without surface damage.

An electronics and optical engineer by education, Grollmann has more than twelve years of experience in technology-driven industries. Most recently he worked at a Swiss optics company as head of the laser business unit and was responsible for international sales of the company's high-power diode lasers.

The TRUMPF Group is a leader in the field of laser marking. A pioneer in laser technology, TRUMPF introduced the VectorMark® compact diode-pumped laser marker in 1997. Today, more than two thousand TRUMPF marking lasers are in use worldwide and TRUMPF has become the leading manufacturer in the diode-pumped laser market.

###

*TRUMPF is one of the world's largest producers of fabricating machinery and a world market leader in lasers used for industrial production technology.
